

Project Name	UML tool that you are planning to use	Project Description (Please state high level features/functions of the software system you are planning to develop)	Team Member 1	Team Member 2	Team Member 3	
Airline Reservation System	ArgoUML	Calculating traveler's gift miles, query for flight number, destination city, departure city and passenger information User can create an account and enter his/her informations(Nickname,birth year,gender,avatar). Making phone call with a random person for 60 seconds. User may extend the call once and send a friendship request. If both of callees likes each other they can start a video call. Friends can send text messages to each other. Inappropriate users can be reported and blocked.	Sevginur INCE	Merve UZUNER		
Unknown Caller	ArgoUML	Users can register with their personal informations (Name, Age, Gender, Travelling Destination and Date, photo). User may change personal information at any time. Arranging Travelling Destination and Date. Searching for Specific Travelling Destination for a Specific Date(If they want they can add more searching options like gender). Users can choose right Travelling friend through search results. Users can message to each other to talk about travelling in detail.	Talha Zekeriyâ Durmuş	Fatma Betül Uluşınar	Nisa Nur Erkin	
Travelling With A New Friend	ArgoUML	People can register as User or Dietician. We have appointment system between user and dieticians. User may talk the dietician, dietician make the food scale for client with using dietician interface. Program remind the user which food that he should eat and which time of day. User can see the food recipes. Dieticians can be rated by users.	Blige Kurtuluş	Burak Arslan		
Healty Diet	Luoidchart	User ; can create an account and enter with personal informations. can see general book list. can create own book list and make comments can take notes. have to give point for every book that user have read	Koray Yaman	Mahmut Hüseyin Koçbaş	Serenay Arslan	
My Library	ArgoUML	Users are students that wants to learn coding/software better, and their ages are between 12-25. User can have an account of this web site. To purpose of this web site is that some big software companies will be able to add some small project to this web site. Users which is students is going to do big software companies email project and they can upload solutions to website. By doing this, students are going to learn better coding and at the same time, Software companies seeking trainees will be able to choose students. Companies will be able to email to students. Students will be able to discuss their solutions. Students can add some friends and follow some big software companies.	Aynur KARAKELLE	Esmâ Nur KARACA	Kevser Beyza İŞİK	
WanneBetterCoding.com	ArgoUML	User can choose the date and the number of people that want to stay at the hotel from reservation screen. can choose one or more suitable room from room selection screen. can fill the personal information page. (name, surname, address, age, etc.) Finally user can finish the reservation procedure by doing payment process.	Sercan YILMAZ	Can Burak TÜRKMEN	Mustafa ŞEN	
Hotel Reservation System	Edraw Max	The project will allow users to track the time on their projects. Users will also be able to compare their daily work averages with everyone else registered to the system. Users will be able to track distinct time intervals for different projects. The application will be universal, so that users will be able to use it anywhere, anytime. The project will also give ability to users to disallow access to certain websites/applications while working to minimize the distraction during work. Project will also be able to provide graphs about user habits and how does their time management looks like and feedback on user for a better understanding of the self.	Cihad EROL	Oğuzhan BEKDEMİR		
Time Management and Planning	Luoidchart	The system identifies the nearest pharmacies where the prescribed drugs are in stock. The doctor writes an online prescription for the patient and gives a code word to the patient to enter the system. The patient enters the system with his/her identity number and prescription code. He/She sees the closest pharmacies where the drugs are in stock. The patient can order and pay online via system if he/she wants. Each pharmacy enters the system using private login information. Pharmacies can follow up their drug stocks by using this system. The pharmacist can see online orders from the system and prepare them. The system warns the pharmacy when any drug is about to be out of stock. In this way the pharmacist can order the medicine.	Mustafa Yasir Öztürk	Ahmet Cem Yazıcı	Tuğberk Kaan Duman	
Pharmacy Finder	ArgoUML	Generates multiple malformed samples, and opens them sequentially. When the program crashes, sample is kept for further investigation. Web Based Student Chat Application With Database Cluster Details: A web application that allows specific department's students to talk and fleshare (only pdf and docx allowed) with each other and their teachers. Features: Cluster database which will prevent data loss if one of the databases down. Secure file sharing that allows students to share files with ssl facillite. Instant messaging. Ban feature: inappropriate messages and the user will be banned for a few days. Login page: Unauthorized student can't access. Anonymous profile for standard user, full profile view for admin users. Announcement which will allow admins to send email to all students.* Admins will be having rights to add and delete a user.	Merve Şahin	Simge Yatkin		
File Format Fuzzer	ArgoUML	This project allows customers to make their order online when they are in a cafe or restaurant. Every table has it's own id. By this way customers can order quickly. This system also gives customers a lot of information about the menu. Customers can add their favourite vegetable to their meal or they can take off some of the ingredients if they want so. If a customer needs further information, The customer can click to the help button and get help from an active employee. When customers are sure about their order, they click to a send button so the printer in the kitchen prints the order with all specifications. Customers can pay online with their credit card.	Efecan Çetinkaya			
AUFEÇ/Ankara University Faculty of Engineering Cho	ArgoUML	This project allows customers to make their order online when they are in a cafe or restaurant. Every table has it's own id. By this way customers can order quickly. This system also gives customers a lot of information about the menu. Customers can add their favourite vegetable to their meal or they can take off some of the ingredients if they want so. If a customer needs further information, The customer can click to the help button and get help from an active employee. When customers are sure about their order, they click to a send button so the printer in the kitchen prints the order with all specifications. Customers can pay online with their credit card.	Sema Örnek	Engin Demirelek		
Online waiter	ArgoUML	As is known, all of the cars have some compulsory and optional parts.Whether the same brand and model car has optional parts makes the car different.This situation is shown in our project User will create an account about his/her necessary information. User can browse, search the products and add them to their cart for ordering. For safe shopping customers money will be held by the system until they confirm the product. Users can track the shipping information of their orders. Users will be able to ask questions about the products to sellers. Users can comment, rate the products and sellers. There will also be seller accounts. Sellers can add new products. Users can make refunds if the criterias are met. Users can compare products.	Özge Seren SÜRGÜT	Ahmet Arda KOYUNCU		
car production system	ArgoUML	As is known, all of the cars have some compulsory and optional parts.Whether the same brand and model car has optional parts makes the car different.This situation is shown in our project User will create an account about his/her necessary information. User can browse, search the products and add them to their cart for ordering. For safe shopping customers money will be held by the system until they confirm the product. Users can track the shipping information of their orders. Users will be able to ask questions about the products to sellers. Users can comment, rate the products and sellers. There will also be seller accounts. Sellers can add new products. Users can make refunds if the criterias are met. Users can compare products.	YUSUF KIZIL	FERHAT TUFEKÇİ		
Online Shopping System	ArgoUML	Administrators can add products. Administrators can make changes on stocks. Customers can get information about the stock of the product. Customers can order the products. Customers can ask questions about the products, and administrators can answer them. There will be a list of products. A Video game engine where developers can make simple 2d games. Users can place up to 100 2d objects in a scene and choose interactions between these objects. Users can set the interactions in the gameManager. RenderEngine will render the assets used in the gameManager. Controlling a media player that can run various file extensions with computer vision technique. The user can give various commands to the computer using the face, eye and hand. If the eyes remain closed for longer than a certain time or if user cannot be detected, the video will be stopped. The video can be rolled back or forward by shifting the hand to the right or left. The up and down movement can also increase or decrease the volume. It will be a solution to unemployment. People can easily find jobs and firms can easily post jobs. In this project, people who wants to work can apply and find a job easily from the appropriate companies by adding their CV. The companies can find work forces for their needy positions.	Anıl Altıntaş	Serdar Biggin	Veli Aliiev	
Stock Tracking System	ArgoUML	Administrators can add products. Administrators can make changes on stocks. Customers can get information about the stock of the product. Customers can order the products. Customers can ask questions about the products, and administrators can answer them. There will be a list of products. A Video game engine where developers can make simple 2d games. Users can place up to 100 2d objects in a scene and choose interactions between these objects. Project Name	UML tool that you are planning to use	Project Description (Please state high level features/functions of the software system you are planning to develop)	Team Member 1	Team Member 2	Team Member 3	
Library Management System	BOUML	A library management system that has been developed to handle basic housekeeping functions of a library. It helps to provide information on any book present in the library to the user as well as staff member. It keeps a track of book issued, returned and added to library.	Yunus GİFTÇİLER	Abdulkadir KARA	Yunus Emre ARAS	
Restaurant/Cafe Management System	BOUML	Management system that supports businesses such as restaurants and cafes. The system would have features which are ordering management, employee management, financial calculation etc...	Sefa Taşcan	Mustafa Göksu	Muhammed Bağ	Mustafa Ahmet DENİZ
School Bus Management System	BOUML	People can sign up and login as a bus company or a passenger. Passengers can search buses and their route. Passengers can get information about bus and its driver. Users can pay online. After payment they can submit their destination, see the bus location and if the bus has a camera they can access on specific times.	Sevinç ŞEN	Oğuz FARSAK	Salih KUNDUZ	
Fitness Center Management System	Modelio	A management system for fitness center owners that features membership/employee management, class scheduling, equipment maintenance information and RFID access control.	Gökrem Kulaksız	Oğuzhan Taçoğlu		
Ideal Tour Application	BOUML	An app that creates the ideal tour according to the users' budget. App uses minimum spanning tree algorithms.	Mehmet Ekinci	Burkay Makedar	Kutay Erdem	
Emergency Management System	Creately	A system for organizing the communication between the medical emergency units and hospitals at the emergency situation.	Büçra Köseoğlu	Esma Adak	Gülşen Tuna	Hira ERTUGRUL
Student Information Tool	BOUML	A tool that helps students to see their weekly schedule, pick their classes, check their attendance records and do various other operations more efficiently and clearly.	Mehmet Akif Kamberoğlu	Yusuf Erkan Yılmaz	Baki Özden	Soner Dağcı
Hairstress Management System	Paeyrus	A multifunctional hairstress management system. It supports image processing to change hair color, also it has a simple accounting system to manage financial situation.	Semih Sandat	Duman Tarık Çelinkaya	Yiğiltaş Tapan	
The Journal Reporter	Modelio	This application prepares bulletin using your favorite newspapers, forums etc. It splits into categories. It can sort your news as an importance. When added a new news it sends you a notification. It suggests you a new bulletins about the newspapers you following. This software stores your old news in database system and then it can delete them.	Aylin Aydin	Yasemin Beyza Bayrak	Dora Uzunsöy	Ege Tekiner
Walter Robot	Umbrello	A robot which is able to do waiters' task in a restaurant. The customers order dishes by using the touch panel on the restaurant's tables. The customer-ordered dishes are loaded into the robot by attendants in the kitchen. Then the attendants define the target tables by using the robot's interface. The robot is responsible for delivering the dishes to the target tables.	Muhammet Fatih Tag	Mehmet Aydın	Mehmet Furkan Sonmez	Ramazan Alper Ocal
Training Center System	BOUML	This system allows to login as admin, lecturers or students. Admin can access and change information of lecturers, students and lectures. However lecturers and students can only access and change their own information. In addition to these, this system includes payment plan, absenteeism, lecture schedule.	Merve Ayas	Büçra Ceylan	Elifnur Kaçar	
Wheel of Fortune Game	BOUML	It has more than one mini-games and tests. It is for Android users. When the game starts, the wheel is turned by the user. One of the mini-games or tests opens randomly. At the end of each game, the user can play the same game again or return to the beginning.	Sena ACAR	Ayşe DEMİREL	Nazlıcan GİYİK	
Online Patient Appointment System	BOUML	With this system people can take an appointment from any doctor that they want unless going to hospital.	Blal Emre GÖZET	Berkant UZ		
Vicinity Information Filter and Navigation System	Visual Paradigm	This system can filter and customize the information given on a map, which it gets via an API. It can also navigate to any chosen destination.	Ahmet Furkan Kılıncı	A. Akın Aktaş	Zümrüt Aktaş (Duman)	
Cinema Reservation System	BOUML	The system that makes movies reservation.	Feyza KAMBER	Yağcı MUĞULKOÇ		
Airline Reservation System	BOUML	The web-based "airline reservation system" project is an attempt to simulate the basic concepts of airline reservation system.	Sena Dumanoğlu	Aesna Kabaca		
Harbor Management System	BOUML	System used for controlling harbor. Delivers information about departures, queues ships into repair, checks available storage and stores passenger information.	Eray Adıyaman	Osmann Oğuz Yüksel	Serhat Kose	Ümit Burak Boz
Sqli Injection Engine	BOUML	The Sqli Injection Engine system provides sqli injection attack detection and analyzes sqli injection attacks for a web site.	Zelha Bektaş	Ayşenur Çevik		
Tour agency System	BOUML	This system provides catalog for customers also provides reservation. It lets create tour program, change or delete tour for admin.	Esra Başkurt
